VIGAN IBRAHIMI

Full-Stack Software Engineer

Prishtina, Kosovo • +383 45 800 676 • vigan70@gmail.com • LinkedIn • GitHub

PROFILE

Full-stack software engineer with 5+ years building production applications using React, Next.js, Node.js, and NestJS. Takes ownership of features from requirements through design, testing, release, and production support.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL
Frontend: React, Next.js, TanStack Query, React Flow, Tailwind CSS
Backend & APIs: Node.js, NestJS, Express, REST, GraphQL, BullMQ, OAuth, JWT
Data: PostgreSQL, MongoDB, Redis, DynamoDB, Prisma, Drizzle
Cloud & DevOps: AWS, Azure, Docker, GitHub Actions
Testing & Automation: Vitest, Jest, Playwright, Puppeteer

PROFESSIONAL EXPERIENCE

Full Stack Developer | AutomatedPros, Dubai, UAE

Jan 2023 – Sep 2024 (Part-time) · Oct 2024 – Present (Full-time)

- Own end-to-end delivery of features spanning React and Next.js interfaces, Node.js and NestJS services, data modeling, third-party integrations, automated testing, and production support.
- Reworked the frontend architecture of a real-time, multi-brand restaurant platform using React and Next.js, simplifying order entry and front-of-house workflows.
- Built a typed React Flow editor with reusable node components, workflow validation, branching and loop controls, and live execution updates.
- Developed a shared execution engine for branching, joins, retries, cancellation, and nested workflows; moved long-running workflow executions to BullMQ workers with Redis coordination and crash recovery.
- Improved application performance and release reliability through frontend and API optimization, automated testing, production debugging, and code reviews.

Full Stack Developer | Rhenum (a Speeex company), Prishtina, Kosovo

Jan 2021 – Sep 2024

- Developed and maintained full-stack features across multiple business applications, including Next.js interfaces, Express and GraphQL APIs, notification workflows, and production releases.
- Delivered HR management, visitor-tracking, and e-learning workflows that reduced manual administrative work.
- Built a multi-tenant CMS that enabled non-technical staff to manage and publish content independently.
- Architected a serverless AI-assisted video-interview platform on AWS Lambda that transcribed and evaluated German-language responses, automating key stages of call-center candidate screening.
- Optimized frontend and API implementations and supported other developers through code reviews and technical guidance.

SELECTED INDEPENDENT PROJECTS

Pertexo | React, TypeScript, React Flow, NestJS, PostgreSQL, Redis, BullMQ | GitHub

- Built a full-stack, multi-tenant workflow platform with a visual React Flow editor, conflict-safe draft saving, version publishing, and live execution monitoring.
- Built NestJS services and workers with PostgreSQL checkpoints, tenant isolation, and transactional outbox delivery; tested recovery from worker restarts, duplicate jobs, and Redis loss.

Arcanis | NestJS, TypeScript, PostgreSQL, Prisma, Redis, BullMQ | GitHub

- Developed a multi-organization healthcare platform where providers manage care records and patients maintain a longitudinal health profile with control over which organizations can access released data.
- Implemented scoped, expiring access grants and approval workflows with immutable snapshots of released records, access audit logs, and reliable notification delivery.

EDUCATION

Bachelor of Engineering in Software Engineering | UBT, Prishtina, Kosovo
